

WATER SOFTENING & FILTRATION

GAC WHOLE HOME FILTER (RECOMMENDED WITH SOFTENER)

Water Treatment Using Carbon Filters: GAC Filter Information

- ❑ Our granular activated carbon (GAC) whole home filter is a proven option to remove certain chemicals, particularly organic chemicals, from water.
- ❑ GAC filters also can be used to remove chemicals that give objectionable odors or tastes to water such as hydrogen sulfide (that rotten eggs odor) or chlorine.
- ❑ 1 cubic foot of this carbon has the ability to remove 1 part per million of chlorine from a million gallons of water. This will prolong the life of your water softener resin as well when used in combination with a water softener.
- ❑ Carbon is one of the most porous materials on earth. It has a filtering surface area of 1,050 square meters per gram (456 grams in a pound – 27 lbs per cubic foot)
- ❑ Water flows over this large carbon block, filtering all the water entering your home
