

WATER SOFTENING & FILTRATION

GREEN NAC WHOLE HOME CONDITIONER / ANTI-SCALE SYSTEM

Water Treatment Using Nucleation Assisted Crystallization

- ❑ **Tank 1:** NAC provides the best alternative to salt and potassium driven water softeners and transforms dissolved hardness into harmless non-soluble micro crystals avoiding scale on pipes, appliances & fixtures.
- ❑ **Tank 2:** Whole home filter: KDF-55 (REDOX) cubes for effective chlorine removal. Reduction of heavy metals and chlorine. Controls micro organisms and bacteria. Granulated Active Carbon (GAC), targeting dissolved and organic chemical, suspended matter and free chlorine, and Quartz provides a solid base material maximizing flow rates
- ❑ Great option for locations where water softeners have been banned or for landlords looking for lower maintenance alternatives to softeners for their rentals
- ❑ Green Technology, No Chemicals, No Regeneration, No Backwash, No Sodium, No Electricity, No Maintenance, No pH change, Preservation minerals, De-Scaling, Biocides
- ❑ While the NAC doesn't actually soften water, it provides most of the benefits of soft water. Because the water hardness ions are unable to form scale, you won't experience the classic hard water problems, like reduced water pressure, restricted flow rates, white spots on your dishware, and difficult-to-clean hard water scale build-up.
- ❑ The life of the media is 5-7 years, after which it must be changed
